FOR PARTICIPANTS ONLY 14 March 2017 ENGLISH ONLY

UNITED NATIONS CENTRE FOR REGIONAL DEVELOPMENT

In collaboration with

Ministry of Public Works and Transport, Lao People's Democratic Republic Ministry of the Environment (MOE), Japan Partnership on Sustainable, Low Carbon Transport United Nations Economic and Social Commission for Asia and the Pacific, and United Nations Office for Sustainable Development

TENTH REGIONAL ENVIRONMENTALLY SUSTAINABLE TRANSPORT (EST) FORUM IN ASIA, 14-16 MARCH 2017, VIENTIANE, LAO PEOPLE'S DEMOCRATIC REPUBLIC

Economics of Road Safety – What does it imply under the 2030 Agenda for Sustainable Development?

(Presentation for EST Plenary Session 10 of the Provisional Programme)

Final Draft

<u>Disclaimer</u>: The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

This presentation has been prepared by Prof. Jac Wismans, SAFER Vehicle and Traffic Safety Centre at Chalmers University for the Tenth Regional EST Forum in Asia. The views expressed herein are those of the author only and do not necessarily reflect the views of the United Nations.

Economics of Road Safety – What does it imply under the 2030 Agenda for Sustainable Development?

Prof. Dr. Jac Wismans

SAFER Vehicle and Traffic Safety Centre at Chalmers University, Gothenburg,
Sweden

Background paper for the 10th Regional Environmentally Sustainable Transport (EST)
Forum in Asia, 14-16 March 2017 in Vientiane, Lao PDR

- Review the Road Safety problem in the Asian EST region
- Discuss the SDG's on Road Safety and Asian "goals, targets and indicators"
- Present a Dashboard on the status of road safety in the EST region
- Introduce the basics of road safety economics and the benefits of road safety investments
- Recommendations on the most costeffective road safety measures in Asia

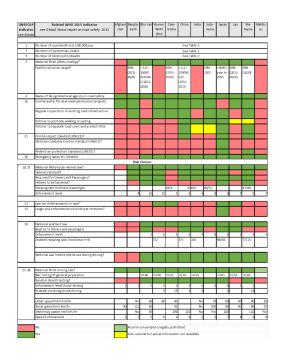

- Review the Road Safety problem in the Asian EST region
- Discuss the SDG's on Road Safety and Asian "goals, targets and indicators"
- Present a Dashboard on the status of road safety in the EST region
- Introduce the basics of road safety economics and the benefits of road safety investments
- Recommendations on the most costeffective road safety measures in Asia

- Review the Road Safety problem in the Asian EST region
- Discuss the SDG's on Road Safety and Asian "goals, targets and indicators"
- Present a Dashboard on the status of road safety in the EST region
- Introduce the basics of road safety economics and the benefits of road safety investments
- Recommendations on the most costeffective road safety measures in Asia

- Review the Road Safety problem in the Asian EST region
- Discuss the SDG's on Road Safety and Asian "goals, targets and indicators"
- Present a Dashboard on the status of road safety in the EST region
- Introduce the basics of road safety economics and the benefits of road safety investments
- Recommendations on the most costeffective road safety measures in Asia

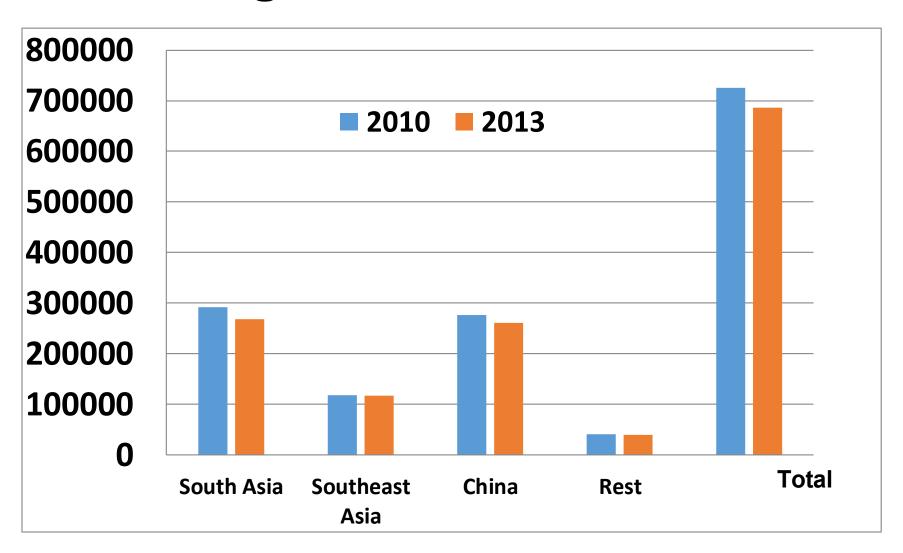

- Review the Road Safety problem in the Asian EST region
- Discuss the SDG's on Road Safety and Asian "goals, targets and indicators"
- Present a Dashboard on the status of road safety in the EST region
- Introduce the basics of road safety economics and the benefits of road safety investments
- Recommendations on the most costeffective road safety measures in Asia

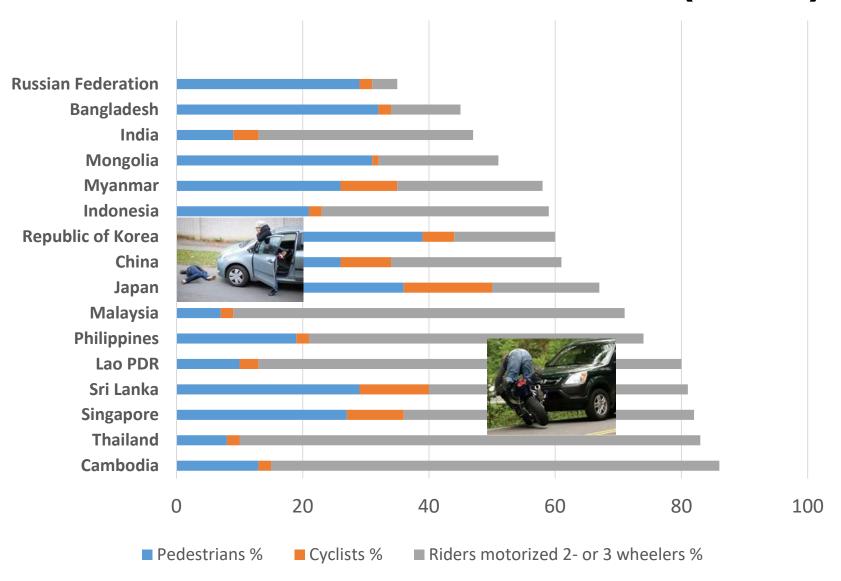

The Road Safety Problem in Asian EST region: number of fatalities

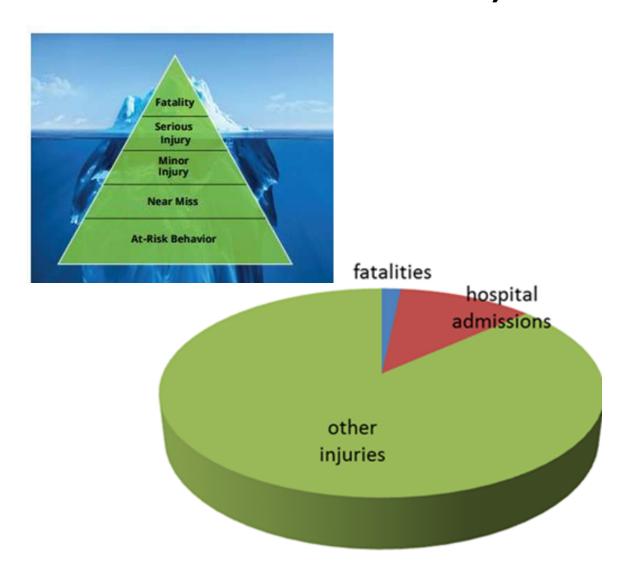

Vulnerable Road Users in 2013 (WHO)

Fatalities are just the top of the Iceberg (WHO 2013/2015 and Worldbank/IHME 2014)

In addition to
700.000 fatalities,
in the Asian EST
region there are 50
million people
injuried, of which 6
million requiring
hospital admission

United Nations Road Safety milestones

- 1958 Agreement on Technical Vehicle Regulations,
- 1968 Convention on Road Signs and Signals
- 1969 Convention on Road Traffic: Vienna Convention
- 1957 Agreement on Transport of Dangerous Goods,
- 1997 Agreement on Periodic Techn. Inspection of Vehicles
- 1998 Agreement on Global Technical Regulations (GTR's)
- 2004 World report on road traffic injury prevention and start of the UN Road Safety Collaboration (UNRSC)
- 2010 Start Decade of Action 2011-2020 for Road Safety
- 2015 2030 Agenda for Sustainable Development

2030 Agenda for Sustainable Development

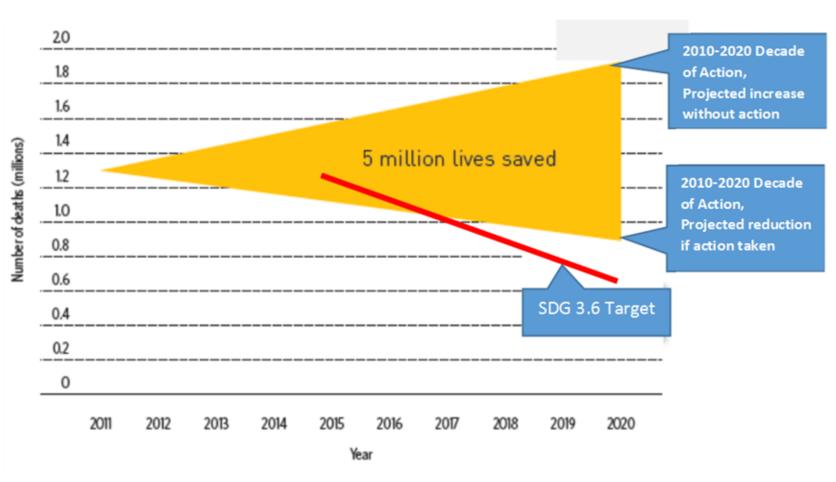

3.6: by 2020, halve the number of global deaths and injuries from road traffic accidents.

11.2: by 2030, provide access to safe, affordable, accessible, and sustainable transport systems for all, improving road safety, notably by expanding public transport, with special attention to the needs of those in vulnerable situations, women and children, persons with disabilities and older persons.

SDG target 3.6: By 2020, halving number of fatalities and injuries

Road safety goals, targets and indicators in Asia: UNCRD-EST

 2010: Bangkok 2020 Declaration, Goal 13: Adopt a zero-fatality policy UNCRD

 2013: Bali Declaration, "Vision Three Zero's - Zero Congestion, Zero Pollution and Zero Accidents"

UNESCAP Road safety goals, targets and indicators

- 2006: Declaration on Improving Road Safety in Asia & Pacific: save 600,000 lives from 2007-2015
- Dec. 2016 (Moscow) Ministerial Conference on Transport: update 8 goals with corresponding targets and indicators in view of Decade of Action for Road Safety and the SDG's

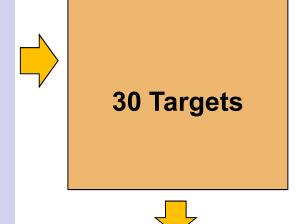

Overall objective: 50 per cent reduction in fatalities and serious injuries on the roads of Asia and the Pacific over the period 2011 to 2020

- 1: Making road safety a policy priority
- 2: Making roads safer for vulnerable road users
- 3: Making **roads safer** and reducing the severity of road crashes ("self-explaining" and "forgiving roads")
- 4: Making **vehicles safer** and encouraging responsible vehicle advertising
- 5: Improving national and regional **road safety systems, management and enforcement**
- 6: Improving **cooperation** and fostering partnerships
- 7: Developing the **Asian Highway network** as a model of road safety
- 8: Providing effective **education** on road safety awareness

40 Indicators

Road safety economics: cost categories

Medical costs

Administrative costs

Property damage costs

Production loss

Human costs: suffering, pain etc.

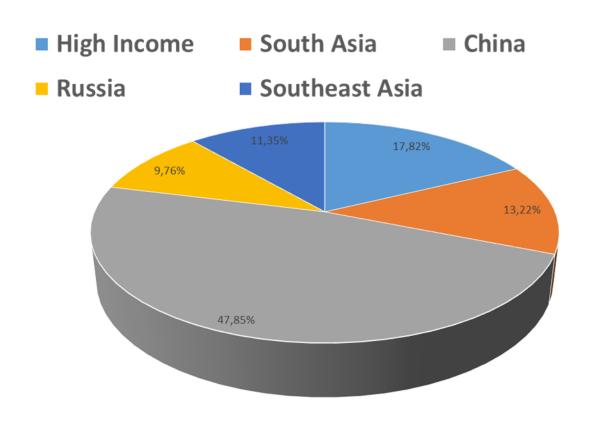

Methodologies for determining accident costs

| | Human Capital method | Willingness-to- Pay method | |
|-----------------------|--------------------------|---------------------------------------|--|
| Medical costs | X | X | VSL = 70 * GDP/capita |
| Administrative costs | X | X | VSI = 17 * GDP/capita |
| Property damage costs | X | X | |
| Production loss | Gross production loss | Net production loss Consumption loss | Value of Statistical Life (VSL) |
| Human costs | X | X | and Value of Statistical Injury (VSI) method: iRAP "Rule of the Thumb" method |

Economic Burden of Road Accidents in Asian EST Region

Total costs: **735 billion US\$** (iRap method)

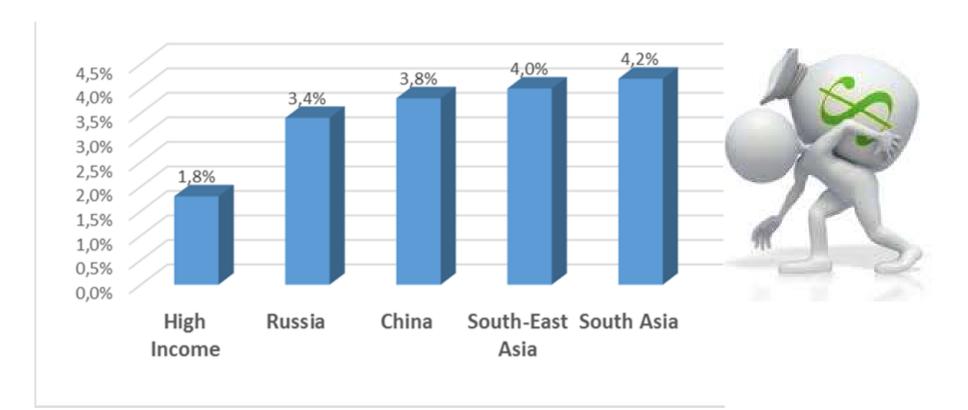

Economic Burden of Road Accidents in Asian EST Region

Average percentage loss of GDP: 3.3%

Cost-effective measures

- Meeting SDG 3.6 in the ASIAN EST would reduced the burden on the economy > 350 billion US\$ per year (1,5% growth in GDP).
- Significant efforts in policy development are needed to achieve the SDG's related to traffic safety.
- In the background paper many examples of cost-effective measures are presented like on helmets, speed, drunk driving, vehicle safety requirements, ITS, public transport and infrastructure measures for pedestrians and cyclists
- Many of these measures can be implemented relatively fast without the need of cost benefit analyses

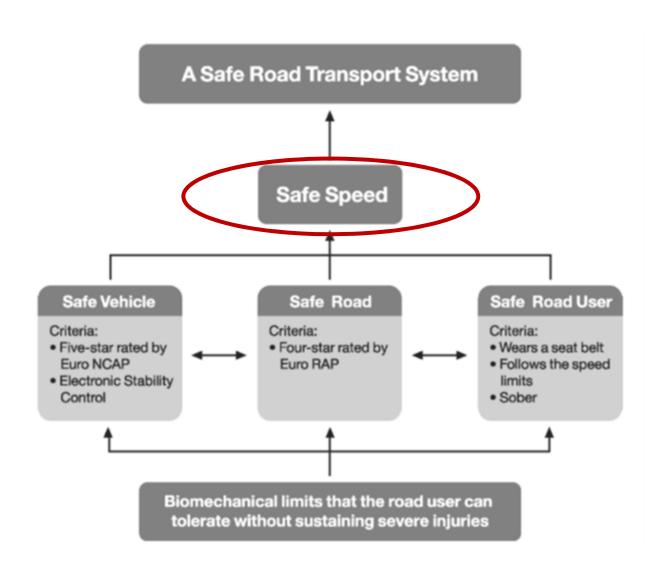

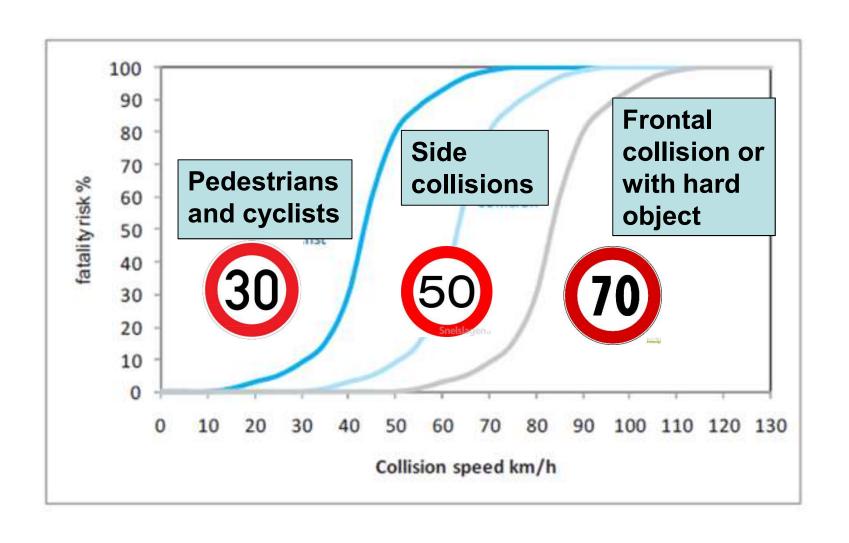

Road Safety Framework

Effect of Speed on Fatality Risk

Recommendations

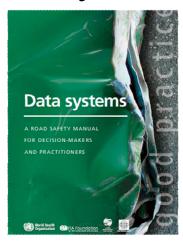

- In the background paper recommendations are presented concerning economics of road safety, effective road safety measures, a dashboard for road safety etc...
- A few of the recommendations will be summarized here.

12 Recommendations in the Background paper

Good accident data needed

- Introduction of good data systems for accidents including establishment of a "baseline" status
- Analyses of the accident data

Enforcement of laws concerning risk factors

If not done yet implement laws concerning risk factors (speed, helmets, seat belts, drunkdriving etc..) and introduce and maintain a strict enforcement policy concerning such measures.

Safety of vulnerable road users

- Invest in infrastructure that benefits pedestrians and cyclists. Such investments are highly cost effective.
- If such measures cannot simply be implemented, strict speed measures (< 30 km/h) should be introduced in case of mixed traffic.

Include safety in road network and public transport planning

- In the stage of road network and public transport planning, road safety should be taken into account in any Cost Benefit Analysis, next to mobility and environment
- Public transport is much safer per km travelled then other forms of transport, which should be taken into account in the analyses

Economics of Road Safety

- For Cost Benefit Analysis the Human Cost are very important to take into account and the WTP approach is the recommended method to determine the Value of Statistical Life (VSL).
- If VSL data are not available it is recommended to use the iRAP "rule of the thumb method" to estimate VSL.

Funding opportunities

Name Goal

| The World Bank Global Road Safety Facility (GRSF) | Increase funding and technical assistance for global, regional and country level initiatives designed to enable low- and middle-income countries to implement their own road safety programmes. |
|--|--|
| The FIA Foundation | Ensure safe, clean, fair and green mobility of all via road safety philanthropy, practical environmental research, interventions to improve air quality and tackle climate change, and strategic advocacy in road traffic injury prevention and motor vehicle fuel efficiency. |
| The Road Safety Fund of the FIA Foundation and WHO | Facilitates alliances between private sector donors and NGOs to support road injury prevention programmes in countries and communities |
| The Road Safety Grants Programme | Support country- and city-level NGO projects to develop and deliver high-impact, evidence-based interventions designed to strengthen road safety policies and their implementation. |
| Bloomberg Philanthropies Initiative for Global Road Safety | Strengthen national road safety legislation, and implement proven road safety interventions at the city level. |
